

Aqua Splint Kit

advantages compared to the classical rigid and soft splints:

- **immediate help** without impressions, bite registration or laboratory procedures
- **does not need grinding** or frequent recall visits (thanks to the hydrostatic balance between both water pads)
- **universal** and applicable in only a few minutes
- **replaces** both relaxation and distraction splints
- **great accuracy** and a excellent fit thanks to individual relining
- **no more than 10 hours** of daily wearing (8 hours by night, 2 hours by day, for 4 - 6 weeks)
- **excellent clinical results** and patient satisfaction thanks to rapid pain reduction, comfort and the advantageous positioning in the lower jaw (less visibility and more stability in comparison to the upper jaw)
- long life (approx. 4-6 weeks) and almost no fluid loss
- can be applied during **orthodontic treatment**

Aqua Splint advantages compared to the traditional Aqua-Pads:

- Conventional Aqua Pads have to be held in position by permanent closure of the mouth and muscular activity, by what sufficient muscle relaxation can be prevented. The appropriate seat of AQUA SPLINT (relining) and the advantageous positioning in the lower jaw enable better muscle relaxation.

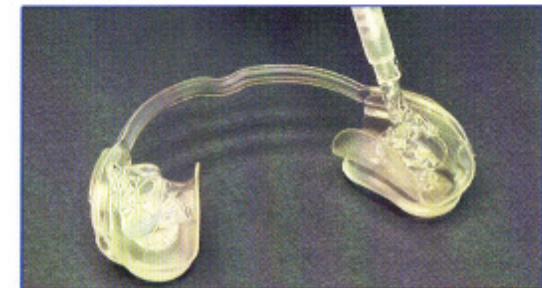

- The Aqua splint is the only self-adjusting customizable TMD splint that can also be used during an orthodontic treatment (block out brackets with protection wax beforehand)
- Long life (4-6 weeks) and almost no fluid loss
- No sharp edges

Indication:

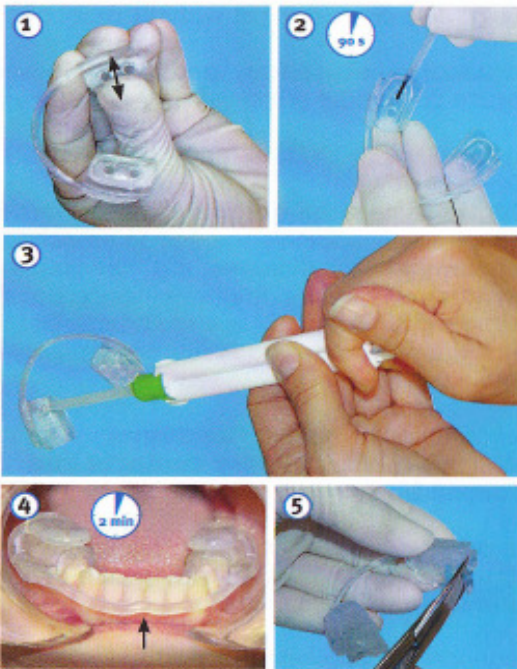

- **urgent pain management** in acute cases (e.g. disc displacement without reduction)
- **muscular relaxation**, particularly in case of acute or periodic grinding / pressing (bruxism)
- optimal initial TMD therapy
- **high differential diagnostic** informative value and supportive therapy in associated puzzling holistic diseases, e.g. cervical syndrome, tinnitus, migraine headache, stress syndrome, etc. (TMD is a multifactorial disorder. Malocclusion is not necessarily the main factor.)
- elimination of hidden **functional disturbances, primary contacts and forced bite**
- easy bite determination for the prosthetic / orthodontic rehabilitation or for the **permanent dental splint**
- support for **osteopathy / physiotherapy** following trauma, operations, limitations and blockades

AQUA SPLINT is a quality product MADE IN GERMANY and patented internationally.
